

Rolando Palermo Rodríguez Cruz

Lead Software Engineer | Backend & Cloud Architect

+52 4451401994 rolando.roc@gmail.com Guanajuato, México
linkedin.com/in/RolandoPalermogithub.com/RolandoPalermo

Profile

Lead Software Engineer with 13+ years of experience building backend systems and cloud-based applications. Strong focus on Java, Kotlin, and Spring Boot. Experienced working on real-world systems in retail, logistics, payments, and electronic invoicing.

Professional Experience

MHP – A Porsche Company <i>Lead Software Engineer</i>	Guadalajara, Mexico <i>Aug 2025 – Present</i>
- Leading the design of a microservices architecture for a VDA5050/LIF-based logistics platform, helping the system scale better and making it easier to maintain. - Own technical backlog decisions and collaborate with Product Management on roadmap and architecture. - Drive engineering best practices through code reviews, mentoring, and sprint leadership. - Design REST APIs, persistence layers, and messaging integrations using Kotlin, Java, Spring Boot, JetBrains Exposed, MQTT, and RabbitMQ. - Define and implement authentication and authorization strategies based on OAuth 2.0, OpenID Connect (OIDC), JWT, Client Credentials, and Authorization Code Flow with PKCE for secure machine-to-machine and user-facing integrations. - Designed and implemented an AI-powered support assistant using LLMs and Retrieval-Augmented Generation (RAG), enabling users to ask natural-language questions about robot status, diagnostics, and technical documentation, significantly reducing the need to create support tickets. - Designed and automated cloud infrastructure provisioning and server configuration workflows using Terraform and Ansible.	
Petco <i>Technical Lead (Promoted from Lead Software Engineer)</i>	Queretaro, Mexico <i>Sep 2024 – Jul 2025</i>
- Promoted to Technical Lead to work on hardware and software initiatives across retail operations in 1,000+ stores, helping improve system reliability and day-to-day store operations. - Led integrations with payment industry platforms (Ingenico, Verifone, ACI), ensuring secure, reliable, and high-volume transaction processing across retail locations. - Designed and implemented backend services following microservices architecture principles for a Point of Sale (POS) platform, enabling scalable and distributed system integrations. - Built cloud-native solutions on AWS (S3, EKS), improving scalability and deployment flexibility. - Optimized data workflows and system integrations across PostgreSQL and SQL Server, improving performance and data consistency.	
Forvia <i>Shopfloor Software Specialist</i>	Tlaquepaque, Mexico <i>Jul 2024 – Sep 2024</i>

- Developed and maintained manufacturing and shopfloor applications using Angular 13, TypeScript, Java 17, Spring Boot, and MySQL, supporting production operations and business workflows.
- Built responsive and user-friendly interfaces using Angular 13, TypeScript, ng-zorro, HTML, and CSS, improving usability and reducing user interaction friction.
- Developed reusable Angular components, TypeScript services, and reactive forms to streamline data entry, validation, and workflow management across multiple modules.
- Implemented API Integration between Angular frontend applications and Spring Boot microservices using REST APIs, enabling real-time communication between shopfloor systems and backend services.
- Consumed and integrated REST APIs using Angular HttpClient and TypeScript, handling authentication, error management, request/response mapping, and business data processing.
- Built microservices using Spring Boot, Java 17, and MySQL, exposing secure REST APIs that supported API Integration with Angular applications and enterprise manufacturing systems.
- Collaborated with cross-functional teams to define API contracts, API Integration requirements, and frontend-backend communication strategies for new business features.
- Developed dashboards, data tables, and monitoring screens using Angular, TypeScript, and ng-zorro, providing operational visibility into manufacturing processes.
- Automated build, testing, and deployment pipelines using GitLab CI/CD, increasing release reliability and accelerating delivery cycles.
- Identified and resolved production bottlenecks across Angular applications, REST APIs, and backend services, improving system performance and overall operational efficiency.

Rappi

Backend Developer

Mexico City, Mexico

Jul 2021 – May 2024

- Worked on a microservices architecture using Java, Kotlin, Spring Boot, and Kafka, helping the system handle higher traffic and making integrations more reliable.
- Applied multithreading, concurrency, and performance optimization techniques to improve application responsiveness and resource efficiency.
- Built and maintained data pipelines using DBT, Airflow, and Astronomer, supporting reliable data processing and analytics workflows.
- Implemented and optimized CI/CD pipelines with Docker, Jenkins, and Groovy, increasing deployment automation and release consistency.
- Ensured code quality through unit testing with JUnit and Mockito, and continuous inspection with SonarQube.
- Collaborated in Agile/Scrum teams, contributing to iterative delivery and continuous improvement of backend services.

BairesDev

Full Stack Engineer

Buenos Aires, Argentina

Jul 2019 – Apr 2021

- Promoted from Backend Engineer to Full Stack Engineer to lead end-to-end feature development across backend services and frontend applications.
- Developed and maintained enterprise web applications using Angular and TypeScript, building reusable components, services, directives, and modules to improve maintainability and user experience.
- Designed and implemented responsive user interfaces using Angular, Angular Material, TypeScript, HTML, CSS, and RxJS, delivering rich client-side functionality and improved application performance.
- Worked extensively on API Integration projects, connecting Angular and TypeScript applications with backend microservices, third-party services, and external enterprise platforms.
- Designed and implemented scalable REST APIs using Spring Boot, Spring Security, OAuth 2.0, JPA/Hibernate, MySQL, Flyway, and Gradle, enabling secure and reliable system integrations.
- Developed responsive and user-centric web interfaces using Angular, Angular Material, HTML, and CSS, improving usability and overall user experience.
- Implemented logging and monitoring solutions using Log4j and Splunk, enhancing system observability and reducing issue resolution time.
- Built and maintained CI/CD pipelines using Jenkins, increasing deployment automation and release consistency.
- Ensured code quality through comprehensive unit testing using JUnit (backend) and Jasmine/Karma (frontend).
- Collaborated in Agile/Scrum teams using Jira and Confluence to deliver features iteratively and efficiently.

Softtek**Java Backend Developer****California, USA***May 2018 – May 2019*

- Developed backend services and enterprise integrations using Java, Spring Boot, and BPMN 2.0 with Camunda, supporting complex business workflows.
- Built and maintained SOAP and REST web services, working with XML technologies such as XSLT, XPath, XQuery, and JAXB for data transformation and integration.
- Designed and optimized data processing and persistence using Oracle 11g, MySQL, and Apache Ignite.
- Worked on document generation solutions using Perceptive Document Composition, supporting business reporting and output workflows.
- Collaborated in Agile environments (Scrum/Kanban) and used tools such as Jira, Bamboo, Jenkins, GitLab, and Confluence to support development and delivery processes.

Seguritech**Java Senior Developer****León, Mexico***Nov 2017 – Apr 2018*

- Designed and developed computer-aided dispatch (CAD) systems to support real-time operations and improve coordination efficiency.
- Built dynamic and responsive user interfaces using AngularJS, jQuery, JavaScript, HTML5, and CSS.
- Developed and integrated backend services using Apache CXF, Spring (Core, MVC, REST, JPA), and JAX-WS, enabling reliable system communication.
- Optimized complex SQL queries, improving database performance and reducing response times.
- Collaborated in Agile/Scrum teams using Jira, Jenkins, and GitLab to ensure continuous delivery and high-quality releases.

MDP**Java Developer****Lima, Peru***Mar 2017 – Aug 2017*

- Led the migration of a legacy application from Struts 2 to Spring MVC 4.
- Replaced a boilerplate authentication model with a Spring Security-based solution, implementing a flexible authentication framework supporting multiple identity providers.
- Worked within Agile environments (Scrum and Kanban), contributing to iterative delivery and continuous process improvement.

IA Interactive**Java Developer****Morelia, Mexico***Nov 2016 – Feb 2017*

- Developed full-stack features using Java 8, Spring Framework (Core, MVC, Security), and Maven, alongside frontend technologies including JavaScript, jQuery, HTML5, Bootstrap, and Stylus.
- Built and integrated SOAP-based services to support enterprise system communication and business workflows.
- Implemented SAP HCM integrations using SAP JCo and RFC, enabling seamless data exchange between enterprise platforms.
- Collaborated in Agile/Scrum teams using Jira and Bitbucket to deliver features iteratively and maintain code quality.

Sistema Nacional de Investigadores (CONAHCYT)**Research Associate****Guanajuato, Mexico***Jul 2014 – Jul 2016*

- Appointed as Research Associate within Mexico's National System of Researchers (CONAHCYT), contributing to academic and applied research initiatives.
- Served as professor at the University of Guanajuato (Computer Systems Engineering Faculty), delivering coursework and mentoring undergraduate students.
- Recognized as Outstanding Student (2014–2015) for academic excellence and performance.

Hermes Transportes Blindados**Java Developer****Lima, Peru***Jul 2013 – Feb 2014*

- Developed enterprise applications and backend components using Java, PL/SQL, Spring Core, MyBatis, and Oracle Forms 11g, supporting critical business operations.
- Built and integrated SOAP-based services using JAX-WS, enabling reliable communication between enterprise systems.
- Deployed and maintained applications on Oracle WebLogic, ensuring stability and performance in production environments.
- Designed data models and optimized database interactions using PL/SQL, improving query efficiency and system responsiveness.
- Produced technical designs and system documentation using UML, facilitating maintainability and cross-team collaboration.

CSTI Corp

Java Developer (Founding Engineer & Sales Contributor)

Guayaquil, Ecuador

Jul 2012 – Jun 2013

- Contributed as a founding engineer in early-stage projects, supporting both technical delivery and client-facing activities, including requirements gathering and solution positioning.
- Designed and implemented electronic invoicing solutions using SOAP, XML, XAdES-BES, XPath, XSD, and XQuery, enabling compliance with regulatory standards.
- Built integrations between Java applications and SAP systems using SAP JCo and RFC, facilitating seamless enterprise data exchange.
- Developed desktop applications and reporting tools using Java (J2SE, Swing), JDBC, SQLite, iReport, and Apache POI, improving data visualization and operational reporting.
- Collaborated with clients and internal teams to deliver tailored solutions, bridging technical implementation and business needs.

GTE Perú

Java Junior Developer

Lima, Peru

Sep 2011 – May 2012

- Developed network management solutions integrating with DSLAM devices (Alcatel, Huawei) using TL-1 and CLI protocols, enabling automated configuration and monitoring of telecommunications infrastructure.
- Built web applications and backend components using Java (J2SE), Spring MVC, JSP, and Servlets, supporting operational workflows and system integrations.
- Developed graphical interfaces and visualization tools using Java2D and Ext JS, improving network topology representation and user interaction.
- Deployed and maintained applications on Apache Tomcat and Solaris environments, ensuring system stability and performance.

Turismo Dias

Java Junior Developer

Trujillo, Peru

Sep 2011 – May 2012

- Developed web applications using Java (J2SE), JSP, Servlets, and Struts following the MVC pattern, supporting business workflows and system operations.
- Built and maintained backend services and data access layers using JPA (EclipseLink) with MySQL and SQL Server, ensuring reliable data persistence and integrity.
- Designed and executed SQL queries and database interactions, improving data access efficiency and application performance.
- Worked within enterprise development environments using Eclipse, contributing to code quality and maintainability.

Skills

Java, Kotlin, SQL, JavaScript

Microservices Architecture, Spring Boot, Spring Framework, REST APIs, SOAP Services, JPA/Hibernate, Exposed Kafka, RabbitMQ, MQTT, SAP JCo/RFC, API Gateway, Electronic Invoicing Integrations

AWS, Docker, Ansible, Terraform, Jenkins, GitLab CI/CD, CI/CD Pipelines

PostgreSQL, MySQL, SQL Server, Oracle, H2, SQLite, Apache Ignite

Angular, AngularJS, HTML, CSS, JavaScript, JQuery

Technical Leadership, Code Reviews, Agile/Scrum, Automated Testing, System Design

Certifications

AWS Certified Cloud Practitioner

Oracle Certified Professional, Java SE 6 Programmer (OCPJP 6)

Cisco Certified Network Associate (CCNA 4)

Languages

Spanish (Native)

English (Professional working proficiency)

Education

Master in Technology Management – University of Guanajuato

Computer Science – National University of Trujillo
