

Rolando Palermo Rodríguez Cruz

Lead Software Engineer | Backend & Cloud Architect

+52 4451401994 rolando.roc@gmail.com Guanajuato, México
linkedin.com/in/RolandoPalermogithub.com/RolandoPalermo

Profile

Lead Software Engineer with 13+ years of experience building backend systems and cloud-based applications. Strong focus on Java, Kotlin, and Spring Boot. Experienced working on real-world systems in retail, logistics, payments, and electronic invoicing.

Professional Experience

MHP – A Porsche Company

Guadalajara, Mexico

Lead Software Engineer

Aug 2025 – Present

- Leading the design of a microservices architecture for a VDA5050/LIF-based logistics platform, helping the system scale better and making it easier to maintain.
- Led a cross-functional engineering team of six developers (3 backend, 2 frontend) in Mexico while coordinating architecture, delivery, and technical alignment with three distributed teams across Germany (2) and Romania (1).
- Own technical backlog decisions and collaborate with Product Management on roadmap and architecture.
- Drive engineering best practices through code reviews, mentoring, and sprint leadership.
- Design REST APIs, persistence layers, and messaging integrations using Kotlin 2.2, Java 21, Spring Boot 3, JetBrains Exposed, PostgreSQL, MQTT, and RabbitMQ.
- Developed interactive web applications using React, TypeScript, and React Flow, building reusable functional components to create graph-based editors for logistics maps and robot navigation workflows.
- Define and implement authentication and authorization strategies based on OAuth 2.0, OpenID Connect (OIDC), JWT, Client Credentials, and Authorization Code Flow with PKCE for secure machine-to-machine and user-facing integrations.
- Designed and implemented an AI-powered support assistant using LLMs and Retrieval-Augmented Generation (RAG), enabling users to ask natural-language questions about robot status, diagnostics, and technical documentation, significantly reducing the need to create support tickets.
- Designed and automated cloud infrastructure provisioning and server configuration workflows using Terraform and Ansible.

Petco

Queretaro, Mexico

Technical Lead (Promoted from Lead Software Engineer)

Sep 2024 – Jul 2025

- Promoted to Technical Lead to work on hardware and software initiatives across retail operations in 1,000+ stores, helping improve system reliability and day-to-day store operations.
- Managed and mentored three cross-functional engineering teams (two in Mexico and one in India), leading a total of eight engineers while coordinating technical delivery across distributed teams.
- Led integrations with payment industry platforms (Ingenico, Verifone, ACI), ensuring secure, reliable, and high-volume transaction processing across retail locations.
- Designed and implemented REST APIs following microservices architecture principles for a Point of Sale (POS) platform using Java 11, Java 17, Spring Boot 3, enabling scalable and distributed system integrations.
- Built cloud-native solutions on AWS (S3, EKS), improving scalability and deployment flexibility.
- Optimized data workflows and system integrations across PostgreSQL and SQL Server, improving performance and data consistency.
- Worked within Agile/Scrum teams, delivering backend features through iterative development and continuous improvement practices.

Forvia

Tlaquepaque, Mexico

Shopfloor Software Specialist

Jul 2024 – Sep 2024

- Developed and maintained manufacturing and shopfloor applications using Angular 13, TypeScript, ng-zorro, Java 11, Java 17, Spring Boot 3, and MySQL, supporting production operations and business workflows.
- Built responsive and user-friendly interfaces using Angular 13, TypeScript, ng-zorro, HTML, and CSS, improving usability and reducing user interaction friction.
- Developed reusable Angular components, TypeScript services, and reactive forms to streamline data entry, validation, and workflow management across multiple modules.
- Implemented API Integration between Angular frontend applications and Spring Boot microservices using REST APIs, enabling real-time communication between shopfloor systems and backend services.
- Consumed and integrated REST APIs using Angular HttpClient and TypeScript, handling authentication, error management, request/response mapping, and business data processing.
- Partnered with cross-functional Agile/Scrum teams to deliver backend solutions in iterative development cycles.
- Automated build, testing, and deployment pipelines using GitLab CI/CD, increasing release reliability and accelerating delivery cycles.

Rappi

Backend Developer

Mexico City, Mexico

Jul 2021 – May 2024

- Worked on an event-driven microservices architecture using Java 8, Java 11, Kotlin 1.6, Spring Boot 3, REST APIs, PostgreSQL and Kafka, helping the system handle higher traffic and making integrations more reliable.
- Applied multithreading, concurrency, and performance optimization techniques to design and build scalable, high-performance applications, improving responsiveness and resource efficiency.
- Built and maintained data pipelines using DBT, Airflow, Astronomer and Snowflake supporting reliable data processing and analytics workflows.
- Implemented and optimized CI/CD pipelines with Docker, Jenkins, and Groovy, increasing deployment automation and release consistency.
- Ensured code quality through unit testing with JUnit and Mockito, and continuous inspection with SonarQube.
- Participated in Agile/Scrum ceremonies, helping deliver reliable backend services through iterative development and continuous refinement.

BairesDev

Full Stack Engineer

Buenos Aires, Argentina

Jul 2019 – Apr 2021

- Promoted from Backend Engineer to Full Stack Engineer to lead end-to-end feature development across backend services and frontend applications.
- Designed and implemented scalable REST APIs using Java 8, Java 11, Spring Boot 2.7, Spring Security, OAuth 2.0, JPA/Hibernate, MySQL, Flyway, and Gradle, enabling secure and reliable system integrations.
- Designed and implemented responsive user interfaces using Angular, Angular Material, TypeScript, HTML, CSS, and RxJS, delivering rich client-side functionality and improved application performance.
- Implemented logging and monitoring solutions using Log4j and Splunk, enhancing system observability and reducing issue resolution time.
- Built and maintained CI/CD pipelines using Jenkins, increasing deployment automation and release consistency.
- Ensured code quality through comprehensive unit testing using JUnit (backend) and Jasmine/Karma (frontend).
- Collaborated in Agile/Scrum teams using Jira and Confluence to deliver features iteratively and efficiently.

Softtek

Java Backend Developer

California, USA

May 2018 – May 2019

- Developed backend services and enterprise integrations using Java 8, Spring Boot 2, and BPMN 2.0 with Camunda, supporting complex business workflows.
- Built and maintained SOAP web services and REST APIs, working with XML technologies such as XSLT, XPath, XQuery, and JAXB for data transformation and integration.
- Designed and optimized data processing and persistence using Oracle 11g, MySQL, and Apache Ignite.
- Worked on document generation solutions using Perceptive Document Composition, supporting business reporting and output workflows.
- Collaborated in Agile environments (Scrum/Kanban) and used tools such as Jira, Bamboo, Jenkins, GitLab, and Confluence to support development and delivery processes.

Seguritech

Java Senior Developer

León, Mexico

Nov 2017 – Apr 2018

- o Designed and developed computer-aided dispatch (CAD) systems to support real-time operations and improve coordination efficiency.
- o Built dynamic and responsive user interfaces using AngularJS, jQuery, JavaScript, HTML5, and CSS.
- o Developed and integrated backend services using Java 8, Apache CXF, Spring (Core, MVC, REST, JPA), and JAX-WS, enabling reliable system communication.
- o Optimized complex SQL queries, improving database performance and reducing response times.
- o Contributed to the successful delivery of backend services by collaborating in Agile/Scrum environments and embracing iterative development.

MDP

Java Developer

Lima, Peru

Mar 2017 – Aug 2017

- o Led the migration of a legacy application from Struts 2 to Spring MVC 4 using Java 8 and SQL Server.
- o Replaced a boilerplate authentication model with a Spring Security-based solution, implementing a flexible authentication framework supporting multiple identity providers.
- o Worked within Agile environments (Scrum and Kanban), contributing to iterative delivery and continuous process improvement.

IA Interactive

Java Developer

Morelia, Mexico

Nov 2016 – Feb 2017

- o Developed full-stack features using Java 8, Spring Framework (Core, MVC, Security), PostgreSQL and Maven, alongside frontend technologies including JavaScript, jQuery, HTML5, Bootstrap, and Stylus.
- o Built and integrated SOAP-based services to support enterprise system communication and business workflows.
- o Implemented SAP HCM integrations using SAP JCo and RFC, enabling seamless data exchange between enterprise platforms.
- o Collaborated in Agile/Scrum teams using Jira and Bitbucket to deliver features iteratively and maintain code quality.

Sistema Nacional de Investigadores (CONAHCYT)

Research Associate

Guanajuato, Mexico

Jul 2014 – Jul 2016

- o Appointed as Research Associate within Mexico's National System of Researchers (CONAHCYT), contributing to academic and applied research initiatives.
- o Served as professor at the University of Guanajuato (Computer Systems Engineering Faculty), delivering coursework and mentoring undergraduate students.
- o Recognized as Outstanding Student (2014–2015) for academic excellence and performance.

Hermes Transportes Blindados

Java Developer

Lima, Peru

Jul 2013 – Feb 2014

- o Developed enterprise applications and backend components using Java 7, PL/SQL, Spring Core, MyBatis, and Oracle Forms 11g, supporting critical business operations.
- o Built and integrated SOAP-based services using JAX-WS, enabling reliable communication between enterprise systems.
- o Deployed and maintained applications on Oracle WebLogic, ensuring stability and performance in production environments.
- o Designed data models and optimized database interactions using PL/SQL, improving query efficiency and system responsiveness.
- o Produced technical designs and system documentation using UML, facilitating maintainability and cross-team collaboration.

CSTI Corp

Java Developer (Founding Engineer & Sales Contributor)

Guayaquil, Ecuador

Jul 2012 – Jun 2013

- Contributed as a founding engineer in early-stage projects, supporting both technical delivery and client-facing activities, including requirements gathering and solution positioning.
- Designed and implemented electronic invoicing solutions using Java 6, SOAP, XML, XAdES-BES, XPath, XSD, and XQuery, enabling compliance with regulatory standards.
- Built integrations between Java applications and SAP systems using SAP JCo and RFC, facilitating seamless enterprise data exchange.
- Developed desktop applications and reporting tools using Java 6 (J2SE, Swing), JDBC, SQLite, iReport, and Apache POI, improving data visualization and operational reporting.
- Collaborated with clients and internal teams to deliver tailored solutions, bridging technical implementation and business needs.

GTE Perú

Lima, Peru

Java Junior Developer

Sep 2011 – May 2012

- Developed network management solutions integrating with DSLAM devices (Alcatel, Huawei) using TL-1 and CLI protocols, enabling automated configuration and monitoring of telecommunications infrastructure.
- Built web applications and backend components using Java 6 (J2SE), Spring MVC, JSP, MySQL and Servlets, supporting operational workflows and system integrations.
- Developed graphical interfaces and visualization tools using Java2D and Ext JS, improving network topology representation and user interaction.
- Deployed and maintained applications on Apache Tomcat and Solaris environments, ensuring system stability and performance.

Turismo Dias

Trujillo, Peru

Java Junior Developer

Sep 2011 – May 2012

- Developed web applications using Java 6 (J2SE), JSP, Servlets, and Struts following the MVC pattern, supporting business workflows and system operations.
- Built and maintained backend services and data access layers using JPA (EclipseLink) with MySQL and SQL Server, ensuring reliable data persistence and integrity.
- Designed and executed SQL queries and database interactions, improving data access efficiency and application performance.
- Worked within enterprise development environments using Eclipse, contributing to code quality and maintainability.

Skills

Java, Kotlin, SQL, JavaScript

Microservices Architecture, Spring Boot, Spring Framework, REST APIs, SOAP Services, JPA/Hibernate, Exposed Kafka, RabbitMQ, MQTT, SAP JCo/RFC, API Gateway, Electronic Invoicing Integrations

AWS, Docker, Ansible, Terraform, Jenkins, GitLab CI/CD, CI/CD Pipelines

PostgreSQL, MySQL, SQL Server, Oracle, H2, SQLite, Apache Ignite

Angular, AngularJS, HTML, CSS, JavaScript, JQuery

Technical Leadership, Code Reviews, Agile/Scrum, Automated Testing, System Design

Certifications

AWS Certified Cloud Practitioner

Oracle Certified Professional, Java SE 6 Programmer (OCPJP 6)

Cisco Certified Network Associate (CCNA 4)

Languages

Spanish (Native)

English (Professional working proficiency)

Education

Master in Technology Management – University of Guanajuato

Computer Science – National University of Trujillo
